You should see what aliases work (or don't) in Part 3 if you use Windows OS.

Windows	Linux / Mac	Action
help	man	This text describes Windows PowerShell cmdlets, which are simple commands used in the PowerShell environment to perform specific tasks that run in the terminal. I will see functions, scripts, and modules that explain the concepts of what the commands are doing. The cmdlet "Get-Help" provides similar information about the commands.
Get-Location	pwd	Print the current working directory, which shows your location in the filesystem. This information aids file access and helps with debugging by indicating where you are working.
Get-ChildItem	Is	List all files and directories, including file name, size, and the last time they were opened or used. Use the mode letter to indicate whether the file can be read (r), accessed by all system info (a), etc.
mkdir	mkdir	New directories can be created; it only requires a name, and the length of the filename is not specified.
Set-Location	cd	Change your current directory to a specific path.
New-Item	touch	Able to create new file, folder in a specific location How code works: PS C:\Users\akinn> cd DirA PS C:\Users\akinn\DirA> New-Item -PathName "Love.txt" -ItemType "file" -Value "Testing" Directory: C:\Users\akinn\DirA
		Mode LastWriteTime Length Name

		PS C:\Users\akinn\DirA>
Move-Item	mv	Allows me to move or rename the file in my directory code: PS C:\Users\akinn\DirA> Move-Item -Path "C:\Users\akinn\DirA\Love.txt" -Destination C:\Users\akinn\DirA\Test" >>
Copy-Item	ср	Copies the item like the file or folder to one directory to another How code works: Copy-Item -Path "C:\temp\Copy.txt" - Destination "C:\temp\Backup\example.txt"
Remove-Item	rm	Able to delete file or folder permanently How code works: Remove-Item -Path "C:\temp\OldFile.txt" Or list folder name
notepad.exe	vim	Open notepad and able to execute
Extra Features	Get-Commands	List all scripts commands- function-alias- cmdlet abc order

Information from reading and practice terminal (Get-commands) also Top 100
